

NEWS RELEASE

PORTAGE ANNOUNCES CONVERSION OF ITS DEBT INTO EQUITY

Toronto, Ontario, September 29, 2014 – Portage Biotech Inc. (“Portage” or “the Company”) (OTC: PTGEF, Canadian Securities Exchange: PBT.U), is pleased to announce that its three Promissory Note holders, two of whom are the directors of Portage, who advanced \$ 100,000 each in July 2014 for a total of \$ 300,000 opted to have their Notes and related Coupons converted into 3,500,001 restricted common shares. Notes were repayable within one year and carried 5% coupon. Both the Note and the coupon were convertible into common shares to be valued at 10% discount to the current financing at \$ 0.10 per share.

The Notes and coupons will be settled effective today by issuance of the agreed number of restricted common shares.

About Portage:

Portage is engaged in researching and developing pharmaceutical and biotech products through to clinical “proof of concept” with an initial focus on unmet clinical needs. Following proof of concept, Portage will look to sell or license the products to large pharmaceutical companies for further development and commercialization.

Portage is seeking discovery and co-development partners in areas such as cancer, infectious disease, neurology and psychiatry developing novel targeted therapies, stem cell therapy and even older marketed products that have been found to have novel patentable characteristics that bring new value to patients.

Portage seeks to work with a wide range of partners, in all phases of development through in-licensing or other types of alliances. The collaboration may include direct funding or investing human capital from our extensive pool of talented scientists and physicians. Specifically Portage will invest sweat equity as well as, or instead of, capital. This internal pool of drug developers, financiers, scientists and physicians will provide unique value-add for our partners including but not limited to mitigating risks, clinical trial design, regulatory expertise and maximizing the rewards.

Portage has two operating subsidiaries – PPL and Biohaven Pharmaceutical Holding Company Limited (“Biohaven”) in which Portage holds 54% equity.

PPL

PPL holds an exclusive worldwide licence in non-oncology fields relating to the Antennapedia protein transduction technology developed by Trojantec. PPL has successfully validated a new proprietary cell permeable peptide platform technology derived from human genes. This proprietary platform technology has been shown to efficiently deliver an active pharmacological agent or cargo into a cell without disrupting the cell membrane. The platform has favorable pharmaceutical properties simplifying formulation development for systemic and locally administered conjugates which will allow more rapid development of drug products. PPL has converted its previously filed provisional patent application for this delivery system to an international patent application that includes a variety of structures utilizing cargos that address important areas of medical need.

PPL has prioritized inflammation as an area with a large therapeutic opportunity.

Using a cargo peptide against an anti-inflammatory target, PPL has demonstrated not only cell penetration but also convincing in-vitro and in-vivo pharmacological effects mediated intracellularly. The lead compound is being evaluated in several animal models of human inflammatory disease that will determine its first indication.

Biohaven

Biohaven is engaged in the identification and development of clinical stage neuroscience compounds targeting the glutamatergic system. The company obtained a license from Yale University regarding intellectual property for the use of certain glutamate modulating agents in the treatment of neuropsychiatric disorders.

Biohaven has been issued by the U.S. Patent and Trademark Office (“USPTO”) a notice of allowance related to Biohaven’s intellectual property licensed from Yale University (U.S. Patent Application No. 11/399,188). The patent claims cover the use of certain glutamate modulating agents in the treatment of Generalized Anxiety Disorder (GAD).

Biohaven’s first drug candidate is being developed for treatment-resistant mood and anxiety disorders. The lead drug candidate is a Phase 2 ready compound and will enter clinical testing for treatment-resistant mood or anxiety disorders next year. A second unique drug candidate also targeting the glutamatergic system has a well-established safety profile and will begin optimization of its formulation in 2014.
